## Project Title: The Human Genome Project

I plan to make a webpage with several different pages. I will make a navigation bar with the menu options.

1) **Landing Page** – I envision this page to be a large picture of the human genome and a title, plus a sentence or two about the project and the navigation bar.
2) **About** – Answers the questions: What did the HGP aim to accomplish? What was the extent of the research? How was it conducted and why? Where did samples come from?
3) **History** – This page will give a timeline of the 13-year project.
4) **Impact** – What were the highlights, shortcomings, accomplishments, findings, and impact of the project?
5) **Ethics** – What were the ethical issues involved in this experiment, one which had never been tried before?
